Udacity is the best education company.

(best, is)

(best, the)

(best, education)

(best, company)

$$P(w_{is} | w_{best})$$

$$P(w_{the} | w_{best})$$

⋮

What is target?

$$T' = \prod_{c=1}^V \prod_{-m \leq j \leq m, j \neq 0} P(w_{c+j} | w_c)$$

$$T = -\log T' = - \sum_{c=1}^V \sum_{\substack{-m \leq j \leq m \\ j \neq 0}} \log P(w_{c+j} | w_c)$$

$$P(w_0 | w_I) = \frac{\exp(u_0^T v_I)}{\sum_{w=1}^V \exp(u_w^T v_I)}$$

how to compute

???

Neural Network to compute target function

$V \times 1$

$d \times V$

one hot encoding

lookup table

$d \times 1$

word embedding V_i

$V \times d$

softmax

cross entropy

logits

softmax

one hot encoding

Target function

= Cross-entropy (softmax(logits))

How to make it more efficient?
compute loss function!

Paper Review

1. Sampled softmax

2. Negative Sampling

Sampled softmax loss function

$$\text{loss/target} = - \sum_{c=1}^V \sum_{\substack{w \neq j \in m \\ j \neq 0}} \log p(w_{c+j} | w_c)$$

$$p(w_o | w_I) = \frac{\exp(u_o^T v_I)}{\sum_{w=1}^V \exp(u_w^T v_I)}$$

$$= \frac{\exp(u_o^T v_I)}{\sum_{w=1}^V \exp(u_w^T v_I)}$$

$$w_o \in V'$$

Negative Sampling

How choose?

$$\log \tilde{P}(w_o | w_i) = \log \sigma(u_o^T v_i) + \sum_{k=1}^K \log \sigma(-u_k^T v_i)$$

$$\log P(w_o | w_i) = \log \frac{\exp(u_o^T v_i)}{\sum_{w=1}^V \exp(u_w^T v_i)}$$

maximize minimize

$$\sigma(-x) = 1 - \sigma(x)$$
